RMX

high performance

RMX Drywash Fast Active works by using advanced polymer technology to create polymer strains of up to 13 molecules each, which are suspended in pure water. Once the product is sprayed onto the surface one set of polymers work to identify the dirt, they lift and begin to dissolve the dirt, whilst another set of polymers form a protective barrier on the surface.

After around 30 seconds, it is possible to wipe over the surface removing the dirt whilst the protective layer is left behind and will last up to 4 months in order to remain effective until the next cleaning event. Finally the last set of polymers will work to leave a high gloss shiny finish without the need for polishes or wax.

The use of RMX Drywash Fast Active will not only provide an effective clean, but enhance and protect corporate colours on the aircraft between cleans.

outstanding clean leaving
a shiny finish

enhances corporate colours

creates an invisible protective
barrier over paint

environmental
impact improved

saves an average airline
13.5m litres of water per year

reduces carbon emissions
by 88% over wet wash

does not contain any
hazardous substances

reduced aircraft downtime

use in conjunction with maintenance

use indoor or outdoor

use at base or on line

full or partial cleans

extend cleaning intervals

airline flexibility

Our unique position in the market as a manufacturer means we can offer our products either through our own global distribution network, through which, stocks are held across multiple continents. Where required, we can supply directly to the airline or aircraft operator. We can also if requested supply the product directly to an airlines chosen aircraft cleaning provider.

In some markets, we are also able to offer a full turn key cleaning provision in conjunction with our aircraft cleaning partners. Please ask us for further details on the markets and bases covered if this is of interest.

- supplied directly to the airline
- supplied to the airlines chosen cleaning partner
- full aircraft cleaning service offered

adapted for military
matte paint

same RMX high
performance

clean but not shiny

drywash defence

We have developed a specific variant of our latest Drywash product which has been engineered specifically for matte military paint. The product keeps the same chemical structure in order to comply with our approvals and maintains the same high performance users expect from RMX, however no longer leaves the shiny finish you see on gloss surfaces. We call this "clean but not shiny".

Of course the product still includes the signature RMX protective coating.
